The Honorable Steve Cowper Governor of Alaska P.O. Box A Juneau, AK 99811

Dear Governor Cowper:

It is my pleasure to submit to you the Annual Report of the Alaska Public Employees' Retirement System (PERS) and Teachers' Retirement System (TRS).

This report shows the financial condition of both the PERS and TRS funds as of June 30, 1986. It has been prepared on the basis of standards set forth by the National Council on Governmental Accounting and is submitted in accordance with the requirements of Alaska Statutes 39.35.020(5) (PERS) and 14.25.030(4) (TRS).

Sincerel.

STEVE COWPER, GOVERNOR

December 12, 1986

Commissioner Garrey Peska Department of Administration P.O. Box C Juneau, AK 99811-0200

Dear Commissioner Peska:

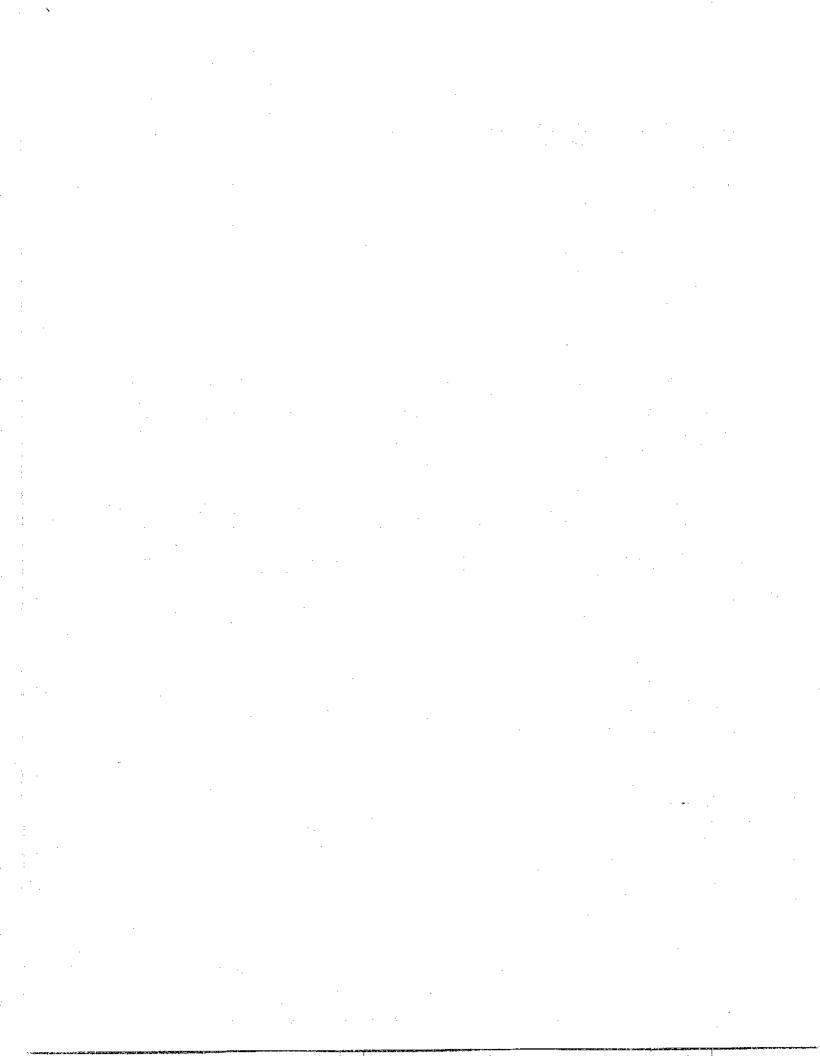

I am pleased to submit to you the Annual Report of the Public Employees' (PERS) and Teachers' (TRS) Retirement Systems. The information presented in this report shows the results of operations and the financial condition of the two retirement funds for the fiscal year ending June 30, 1986. The financial statements in this report are presented on the accrual basis of accounting in accordance with the Financial Accounting Standards Board, Standard No. 35.

The report contains the financial statements, the audit report from the professional accounting firm of Peat, Marwick, Mitchell and Company, and excerpts from the most recent actuarial valuations prepared by the system's actuary, William M. Mercer-Meidinger, Inc. Also included are the fiscal year investment comments from the Division of Treasury, Department of Revenue, which is charged with the investment of the retirement funds.

The June 30, 1986, net assets available for benefits was \$1,739,843,490 for the PERS, an increase of 34.3 percent over the previous year; and \$1,141,650,155 for the TRS, an increase of 31.8 percent over the previous year.

The graphs on pages 39 and 40 (PERS) and pages 67 and 68 (TRS) demonstrate the increases in total assets and benefits paid in recent years. Additional information for the fiscal years ending June 30, 1984, through June 30, 1986, is provided in the following table:

	FY	1986	FY	1985	FY	1984
n (6	PERS	TRS	PERS	TRS	PERS	TRS
Number of participating employers (reporting entit	112 ies)	61	105	59	94	59
Number of participating members	27,643	8,824	27,183	8,684	25,803	8,259
Number of retired members	4,657	2,098	4,317	2,022	3,859	1,764

	F	Y 1986	FY	1985	FY	1984
	<u>PERS</u>	<u>TRS</u>	<u>PERS</u>	TRS	<u>PERS</u>	TRS
Average Annual Retirement Benefit	\$10,068	\$18,504	\$10,032	\$18,408	\$9,000	\$15,792
Average Annual Medical Benefit	\$2,100	\$2,100	\$2,302	\$2,302	\$1,873	\$1,873

The fall 1985 PERS and TRS Board meetings were held in Fairbanks and the spring 1986 meetings were held in Juneau. The annual actuarial valuations and employer contribution rates were approved at the spring meetings.

The following legislation affecting the retirement systems passed during the 1986 legislative session:

- Chapter 81, SLA 1986 (HB 228), added a provision which allows TRS members to retire and receive a normal benefit with 20 years of part-time membership service.
- Chapter 117, SLA 1986 (HB 237), added provisions effective January 1, 1987, which recognize the rights of PERS and TRS members' spouses and dependents, including former spouses under a qualified domestic relations order.
- Chapter 26, SLA 1986 (HB 382), established a retirement incentive program (RIP) to encourage eligible PERS and TRS members to voluntarily retire. The program is designed to reduce the cost of personal services and minimize the impact of workforce reductions.
- Chapter 82, SLA 1986 (HB 252), enacted major legislation affecting primarily the PERS. It provided for an automatic, actuarially funded, post retirement pension adjustment (PRPA); an increased benefit multiplier; and various cost-containment measures including an increase in PERS employee contribution rates by an additional 21% of salary. In addition, beginning January 1, 1987, employee contributions will be treated as employer "pick up" contributions under 26 U.S.C. 414 (h)(2) and will be withheld before deducting applicable federal taxes. Other cost-containment measures affect only new PERS members first hired after June 30, 1986. They include: a partial pay provision for health coverage for retirees before age 65; no Alaska Cost of Living Allowance (COLA) for retirees before age 65; ineligibility for military credit for members eligible to receive a benefit from the federal government for the same service; and increasing the early and normal retirement ages to 55 and 60 respectively. The legislation also included various housekeeping provisions affecting both the PERS and TRS.

A second Request for Proposals (RFP) for the development of a new Combined Retirement System was issued in October 1986. Proposals are due on January 12, 1987. The original RFP for the new system was withdrawn because

of potential legal problems. During this past year, enhancements to the current PERS and TRS systems were completed.

A copy of this report will be mailed to all PERS and TRS employers. The cooperation of those employers is essential to the successful operation of the system.

Sincerely,

J. K. Humphreys

BILL SHEFFIELD, GOVERNOR

STATE OF ALASKA

DEPARTMENT OF REVENUE

OFFICE OF THE COMMISSIONER

P.O. BOX S JUNEAU, ALASKA 99811-0400 PHONE: (907) 465-2300

November 24, 1986

The Honorable Bill Sheffield Governor of Alaska P.O. Box A Juneau, AK 99811

Dear Governor Sheffield:

As the Treasurer and legal fiduciary of the Alaska Retirement Systems' funds, it is my pleasure to report to you that the combined return on the Public Employees and Teachers Retirement Funds' investments during the fiscal year ending June 30, 1986 set a new record level of over 26 percent, surpassing the record of almost 25.5 percent which was established in fiscal year 1985. The \$744.6 million increase in the market value of the Funds' investments exceeded the \$572.8 million increase of the preceding year and consisted of \$580.6 million of investment returns (including both income and capital gains) and \$164 million of employee and employer contributions (net of benefit payments and expenses).

Over the last few years we have developed new investment policies that require both the use of professional investment managers and the maintenance of flexible investment strategies which anticipate and readily adapt to continuing changes in the financial markets. The combination of the new policies together with large increases in market prices has led to the exceptionally high investment returns on the Funds' assets. Our strategy during the last two years of more than doubling the percentage of assets invested in equities and of lengthening the bond maturities has substantially enhanced the total Funds' investment performance. Foreign common stock allocations were increased from 1.5 percent to 6.3 percent of the Funds' assets and their market yield has averaged 58.9 percent annually. Domestic common stock allocations were increased from 12.2 percent to 25.3 percent of the Funds' assets and their market yield has averaged 35.1 percent annually. Lengthening the average bond maturities to 18 years from 12 years helped to give the bond investments a market yield of 24.3 percent annually.

Security prices rose substantially in fiscal year 1986 despite relatively poor economic performance and declining corporate

The Honorable Bill Sheffield November 24, 1986 Page 2

profits. Our expectations for fiscal year 1987 are for equally poor or even lower levels of economic activity and business profitability, but we do not believe that financial market prices will continue rising. Consequently, the returns on investments during fiscal year 1987 may drop below 10 percent. Although our outlook for near term investment returns is substantially lower than the rates we have recently enjoyed, we continue to keep the Funds positioned to take advantage of any rise in security prices, and we are prepared to take protective actions to offset any severe declines in prices. The preliminary outlook for the next two fiscal years following the current one is much better. Economic growth and profitability should be rising then and the potential returns on investments should be greater. As of June 30. 1986 the financial condition of the State's retirement systems placed them within the top 20 percent of all state pension funds in the nation.

Respectfully,

Milton B. Barker

Acting Commissioner of Revenue

Walton B. Backer

Peat, Marwick, Mitchell & Co. Certified Public Accountants Alaska Mutual Bank Building 601 West 5th Avenue, Suite 700 Anchorage, Alaska 99501

Division of Retirement and Benefits and Members of the Alaska Public Employees' Retirement Board State of Alaska Public Employees' Retirement System:

We have examined the statements of net assets available for benefits of the State of Alaska Public Employees' Retirement System as of June 30, 1986 and 1985, and the related statements of changes in net assets available for benefits for the years then ended and the statement of accumulated plan benefits as of June 30, 1985. Our examinations were made in accordance with generally accepted auditing standards and, accordingly, included such tests of the accounting records and such other auditing procedures as we considered necessary in the circumstances.

In our opinion, the financial statements referred to above present fairly the financial status of the Plan as of June 30, 1985, and the changes in its financial status for the year then ended and information regarding net assets available for benefits and changes therein as of and for the year ended June 30, 1986, in conformity with generally accepted accounting principles applied on a consistent basis.

Peat, Marwid, Mitchell & G.

Statement of Accumulated Plan Benefits

June 30, 1985

(in thousands)

Actuarial present value of accumulated benefits: Vested benefits:

Participants currently receiving payments
Other participants
Total vested benefits

434,841 815,895 1,250,736

Contingent liability (note 7)

107,879

Total actuarial present value of accumulated benefits

\$ 1,358,615

At June 30, 1984, the total actuarial present value of accumulated benefits was \$1,125,864. During the year ended June 30, 1985, there were no changes in the actuarial present value as a result of a change in actuarial assumptions. Subsequent to June 30, 1985, new actuarial assumptions were adopted. Had these assumptions been used in the above calculation, the effect would be to decrease the total actuarial present value of accumulated benefits by \$110,381 (notes 3 and 6).

See accompanying notes to financial statements.

Notes to Financial Statements

June 30, 1986 and 1985

(1) Description of State of Alaska Public Employees' Retirement System (Plan)

The following brief description of the Plan is provided for general information purposes only. Participants should refer to the Plan agreement for more complete information.

General

The Plan is a joint-contributor plan created by State of Alaska Statutes effective January 1, 1961. The Plan was established to encourage qualified personnel to enter and remain in the service of the State, political subdivision or public organization of the State. Inclusion in the Plan is a condition of employment for State of Alaska employees except as otherwise provided for an elected officer. A municipality or other political subdivision of the State may request to become an employer in this system. The Plan was amended in June 1986. The effect of the amendment is not included in the calculation of accumulated Plan benefits. The significant Plan amendments are included in the applicable notes to the financial statements.

Pension Benefits

Employees hired prior to July 1, 1986 with five or more years of credited service are entitled to annual pension benefits beginning at normal retirement age 55 or early retirement age 50. For employees hired after June 30, 1986, the normal and early retirement ages are 60 and 55, respectively. The normal annual pension benefit is equal to 2% of the member's highest three-year average monthly compensation for the first ten years of service, 2-1/4% for the second ten years of service and 2-1/2% for the third ten years of service. All service earned prior to July 1, 1986 will be calculated using the 2% multiplier. Employees with 30 or more years of credited service (20 years for peace officers and firemen) may retire at any age and receive a normal benefit. Employees retiring prior to January 1, 1987 may elect to receive their pension benefits in the form of a joint and survivor annuity. Beginning January 1, 1987, new retirees must receive their benefits in the form of a joint and survivor annuity unless the member's spouse agrees to another form of benefit. Minimum benefits for employees eligible for retirement are \$25 per month for each year of credited service. Major medical benefits are provided without cost to all members first hired before July 1, 1986. Members first hired after June 30, 1986 may elect major medical benefits.

Notes to Financial Statements

Retirement Incentive Program

Legislation passed in May 1986 established a retirement incentive program designed to encourage eligible employees to voluntarily retire in order to reduce personnel service costs. The program is available to eligible State of Alaska employees until June 30, 1987, eligible University of Alaska employees where the program is available from October 1, 1986 to September 30, 1987, and all other members from January 1, 1987 to December 31, 1987.

Death and Disability Benefits

If an active employee dies from occupational causes the employee's spouse or dependent children receive a monthly pension from the Plan. The amount of the pension changes on the date the employee's normal retirement would have occurred if the employee had lived. The new benefit is based on the employee's average base salary at the time of his/her death and the credited service that would have occurred had the employee lived and continued to work until normal retirement date. Nonoccupational death benefits are paid based on years of service and would consist of either a lump-sum benefit or a joint and survivor option. Active employees who become permanently disabled due to an occupational injury receive disability payments until normal retirement age. At normal retirement age the disabled participants begin receiving normal retirement benefits computed as though they had been employed to normal retirement age with their annual compensation remaining the same as at the time they became disabled.

(2) Summary of Significant Accounting Policies

Valuation of Investments

Investments, other than real estate equity funds and loans and mortgages, are carried at market value to reflect their asset values as determined by the last quoted market price at June 30, 1986 and 1985.

Real estate equity funds are stated at estimated market value as determined by the independent management of the investment accounts. These investments do not have a readily available market and generally represent long-term investments.

Notes to Financial Statements

Loans and mortgages are serviced by the institution from which the loan is purchased. The policy of the Plan is to hold these investments until maturity and, accordingly, the investments are stated at cost. Loans and mortgages include approximately \$2,183,000 and \$2,113,000 for 1986 and 1985, respectively, of other real estate owned. Other real estate owned represents properties on which the Plan has foreclosed and is holding with the intent to resell.

Contributions Receivable

Contributions from employees and employers for service through June 30 are accrued. These contributions are considered fully collectible and, accordingly, no allowance for uncollectible receivables is considered necessary.

Investment Income Receivable

Investment income receivable represents amounts earned but not yet received as of June 30. These amounts are considered fully collectible and, accordingly, no allowance for uncollectible receivables is considered necessary.

(3) Actuarial Present Value of Accumulated Benefits

Accumulated benefits are those future periodic payments, including lump-sum distributions, that are attributable under the Plan's provision to the service employees have rendered. Accumulated benefits include benefits expected to be paid to retired or terminated employees or their beneficiaries, beneficiaries of employees who have died, and present employees or their beneficiaries. Benefits under the Plan are based on employees' compensation during their highest three years of credited service. The accumulated benefits for active employees are based on their average compensation during the three years ending on the date that the benefit information is presented (the valuation date). Benefits payable under all circumstances—retirement, death, disability, and termination of employment—are included, to the extent they are deemed attributable to employee service rendered to the valuation date.

The actuarial present value of accumulated benefits is determined by an actuary from William M. Mercer-Meidinger Incorporated and is that amount that results from applying actuarial assumptions to adjust the accumulated benefits to reflect the time value of money (through discounts for interest) and the probability of payment (by means of decrements such as for death, disability, withdrawal, or retirement) between the valuation date and the expected date of payment. The significant actuarial assumptions used in the valuations as of June 30, 1985 are as follows:

Notes to Financial Statements

- a. Actuarial cost method attained age normal, also known as aggregate method with supplemental liability, unfunded accrued benefit liability amortized over 25 years.
- b. Mortality basis 1971 Group Annuity Mortality Table.
- c. Retirement age the earlier of age 62 and 15 years of service, but not prior to age 57 for "other" members. Police and fire members are assumed to retire at the earlier of 22 years of service or attainment of age 55.
- d. Interest rate 8% per annum, compounded annually, net of investment expenses.
- e. Health cost inflation 8% per annum.
- f. Salary scale increase of 8% per annum for the first five years of employment and 7% per year thereafter.
- g. Cost of living allowance (domicile in Alaska) 60% of those receiving benefits will be eligible to receive the cost of living allowance.
- h. Contribution refunds 100% of those terminating after age 35 with five or more years of service will leave their contributions and thereby retain their deferred vested benefit. All others who terminate are assumed to have their contributions refunded.
- Asset valuation three-year average ratio between market and cost values of assets.

Turnover and disability assumptions are based upon actual historical occurrence rates of the Plan. The foregoing actuarial assumptions are based on the presumption that the Plan will continue. Were the Plan to terminate, different actuarial assumptions and other factors might be applicable in determining the actuarial present value of accumulated benefits.

Notes to Financial Statements

(4) Funding Policy

Employees' Contributions

Employees contribute 4-1/4% of their compensation, except for peace officers and firemen who contribute 5% of their compensation to the Plan. Contributions are collected by employers and remitted to the Plan. Beginning January 1, 1987, contribution rates will increase to 7.5% for peace officers and firemen and 6.75% for other employees.

Employer Contribution

Employer contributions vary and are determined annually on an actuarial basis for each employer.

(5) Investments

During 1986 and 1985, the Plan's investments (including investments bought, sold, as well as held during the year) appreciated (depreciated) in value as follows:

	<u> 1986</u>	1985
United States Government securities Corporate bonds, notes and debentures Common stocks Foreign stocks Foreign bonds	\$ 71,894 4,805 60,758 23,152 (1,403)	74,132 12,429 23,011 5,087 1,403
Real estate equity funds	\$ 667 159,873	1,671 117,733

(6) Subsequent Event

In September 1986, the Plan adopted new actuarial assumptions for the year ending June 30, 1987 as determined by an actuary from William M. Mercer-Meidinger Incorporated. The significant new actuarial assumptions which will be used in the valuations as of June 30, 1986 are as follows:

- a. Actuarial cost method projected unit credit, unfunded accrued benefit liability amortized over 25 years, funding surplus amortized over 5 years.
- b. Mortality basis 1984 Unisex Pension Mortality Table set back 1-1/2 years.

Notes to Financial Statements

- c. Retirement age retirement rates based on actual experience.
- d. Interest rate 9% per annum, compounded annually, net of investment expenses.
- e. Health cost inflation 9% per annum.
- f. Salary scale increase of 6.5% for the first five years of employment and 5.5% per year thereafter.
- g. Cost of living allowance (domicile in Alaska) 59% of those receiving benefits will be eligible to receive the cost of living allowance.

Using the new actuarial assumptions, the total actuarial present value of accumulated benefits at June 30, 1985 is as follows (in thousands):

Vested benefits: Participants currently receiving payments Other participants Total vested benefits	\$ 438,625 647,565 1,086,190
Nonvested benefits	162,044
Total actuarial present value of accumulated benefits	\$ 1,248,234

(7) Contingent Liabilities

The State of Alaska Public Employees' Retirement System (System) is a party to an action contesting application of the early retirement factors adopted by the System in calculation of the actuarial present value of the accumulated plan benefits. If the early retirement factors are ultimately rejected, the actuarial present value of the accumulated plan benefits would increase by approximately \$54,000,000, which could result in an increase of approximately .74% in the average annual employer contribution rate.

William M. Mercer-Meidinger, Incorporated

HIGHLIGHTS

This report has been prepared by William M. Mercer-Meidinger, Incorporated to:

- (1) present the results of a valuation of the Alaska Public Employees' Retirement System as of June 30, 1985;
- (2) review experience under the plan for the year ended June 30, 1985;
- (3) determine the contribution rates for the State and for each political subdivision of the State;
- (4) provide reporting and disclosure information for financial statements, governmental agencies, and other interested parties.

The report is divided into three sections. Section 1 describes the basis of the valuation. It summarizes the plan provisions, provides information relating to the plan participants, and describes the funding methods and actuarial assumptions used in determining liabilities and costs.

Section 2 contains the results of the valuation. It includes the experience of the plan during the 1984-85 plan year, the current annual costs, and reporting and disclosure information. Section 3 contains additional supporting exhibits.

The principle resu	ults are as follows:	1004	1005

^{*} In thousands.

In preparing this valuation, we have employed generally accepted actuarial methods and assumptions, in conjunction with employee data provided to us by the plan sponsor and financial information provided by Peat, Marwick, Mitchell & Company, to determine a sound value for the plan liabilities. We believe that this value and the method suggested for funding it are in full compliance with the Employee Retirement Income Security Act of 1974, the Internal Revenue Code, and all applicable regulations.

Respectfully submitted,

Robert F. Richardson, ASA

Robert J. Richardson

Principal

RFR/js

April 3, 1986

ANALYSIS OF THE VALUATION

Actuarial Method and Assumptions

This actuarial report is the first to utilize the projected unit credit actuarial method. The actuarial assumptions remain unchanged since those adopted in March 1982. The Alaska statutes require that an experience analysis of the Systems' actuarial assumptions be performed at least every six years. Although changes have occurred since the last experience study, we still believe that the current actuarial assumptions are appropriate to determine liabilities and costs under the Public Employees' Retirement System.

This change in funding method was made to conform to the accounting procedures which were adopted by the Governmental Accounting Standards Board (GASB) in December 1985. Under the prior actuarial funding method, the funding ratio would have been 92.1% while the average employer contribution rate would have been 13.59%.

Investment Performance

During the 1985 fiscal year, the investment return rate, based upon market values, was more than 22% . . . clearly the highest return rate since the inception of PERS. Based upon the three-year smoothing approach used to determine valuation assets, the return rate during fiscal year 1985 was 15.64%. This excellent investment performance was primarily responsible for the decrease in the average contribution rate.

Health Inflation

For the first time since retiree health coverage became a benefit in PERS, there has been a decrease in the monthly premium. As reported in last year's actuarial report, we had projected the FY86 premium to decrease to \$165 per month. The actual premium for the year decreased to only \$168.25. Consequently, there was a very small actuarial loss from this assumption.

Salary Increases

The third most important factor affecting costs and liabilities under PERS is the impact of inflation on salary increases. For the second straight year, salary increases on an average were less than the actuarial assumption. As of June 30, 1985, the average annual salary was \$30,555 . . . an increase of only 1.4% over the prior year. Accordingly, there were actuarial gains from less-than-anticipated salary increases which contributed, along with the excellent investment performance, to the decrease in employer contribution rates and the large increase in the funding ratio.

Membership Statistics

For the second year in a row, there was a large increase in the average age of the active PERS members. During the 6 1/2 year period from January 1, 1977 to June 30, 1983, there has been a modest but steady trend upward in the average age, with average annual increases of .09 years. In the last two years, however, average age has increased at .38 years per year. This phenomenon continues to put upward pressure on costs and liabilities . . . thus dampening the beneficial affects of actuarial gains from investment and salary increases.

Retiree Statistics

There was a large increase in the number of new retirees during FY85, with 512 new benefit recipients added to the pension rolls. Average age at retirement showed a drop of almost half a year. This statistic continues to be volatile, with the average age at retirement vacillating between 57 1/2 and 59 1/2 for the last several years.

Conclusions

Primarily due to the excellent investment performance during FY85, employer contribution rates decreased for most political subdivisions. Cost containment measures in the retiree health program, as well as a general slowing of medical inflation, both contributed to a smaller actuarial loss from health inflation than we have witnessed in several years. The change in actuarial funding methods led to a decrease in both the funding ratio and employer contribution rate.

Section 1.6 ACTUARIAL BASIS

Valuation of Liabilities

- A. Actuarial Method Projected Unit Credit. The unfunded accrued benefit liability is amortized over 25 years.
- B. Method For Accumulated Plan Benefit Values

The actuarial present value of accumulated plan benefits (the term used for Financial Accounting Standards Board purposes) and present value of accrued benefits are a measure of plan benefits which have been earned to date. These are not only a valuation of retirement benefits, but also of deferred vested, death benefits, and other ancillary benefits. Earnings and service for benefit purposes which are expected to be earned after the valuation date are excluded from these values.

The actuarial assumptions used to determine these values are identical to those used for the funding purposes.

In estimating accumulated benefits, final average compensation is based on compensation data in the possession of the actuary.

C. Actuarial Assumptions

1.	Interest	8%	per	year,	compounded	annually,
		net	of	investm	ent expense	S .

2. Salary Scale 8% per year for the first five years of employment and 7% per year thereafter.

3. Health Cost Inflation 8% per year.

4. Mortality 1971 Group Annuity Mortality Table.

5. Turnover Based upon the 1980-81 actual total turnover experience (see Table 1).

6. Disability

Incidence rates in accordance with Table 2. Post-disability mortality in accordance with rates published by the Pension Benefit Guaranty Corporation to reflect mortality of those receiving disability benefits

under Social Security. 94% of the disabilities are assumed to be occupational for Police and Fire; 28% for others.

7. Retirement Age

The earlier of age 62 and 15 years of service, but not prior to age 57 for "other" members. Police and Fire members are assumed to retire at the earlier of 22 years of service or attainment of age 55.

8. Spouse's Age

Wives are assumed to be four years younger than husbands.

9. Contribution Refunds

100% of those terminating after age 35 with five or more years of service will leave their contributions in the System and thereby retain their deferred vested benefit. All others who terminate are assumed to have their contributions refunded.

10. C.O.L.A.

60% of those receiving retirement benefits will be eligible for C.O.L.A.

11. Expenses

No loading for expenses.

Valuation of Assets

Based upon the three-year average ratio between market and cost values of the System's assets. Assets are accounted for on an accrual basis.

Valuation of Medical Benefits

Medical benefits for retirees are provided by the payment of premiums from the trust fund. A pre-65 cost and lower post-65 cost (due to Medicare) were assumed such that the total rate for all retirees equals the present premium rate. These medical premiums are then increased with the health inflation assumption. The actuarial cost method used for funding health benefits is the same method used to fund retirement benefits. Health benefits are assumed to be fully accrued once a member becomes vested.

Division of Retirement and Benefits and Members of the Alaska Teachers' Retirement Board State of Alaska Teachers' Retirement System:

We have examined the statements of net assets available for benefits of the State of Alaska Teachers' Retirement System as of June 30, 1986 and 1985, and the related statements of changes in net assets available for benefits for the years then ended and the statement of accumulated plan benefits as of June 30, 1985. Our examinations were made in accordance with generally accepted auditing standards and, accordingly, included such tests of the accounting records and such other auditing procedures as we considered necessary in the circumstances.

In our opinion, the financial statements referred to above present fairly the financial status of the Plan as of June 30, 1985, and the changes in its financial status for the year then ended, and information regarding net assets available for benefits and changes therein as of and for the year ended June 30, 1986, in conformity with generally accepted accounting principles applied on a basis consistent with that of the preceding year.

Leat, Marwick, Mitchell & Co.

September 25, 1986

Statement of Accumulated Plan Benefits

June 30, 1985

(in thousands)

Actuarial present value of accumulated benefits: Vested benefits: Participants currently receiving payments Other participants Total vested benefits	\$ 382,711 <u>520,456</u> 903,167
Nonvested benefits	48,746
Total actuarial present value of accumulated benefits	\$ 951,913

At June 30, 1984, the total actuarial present value of accumulated benefits was \$804,018. During the year ended June 30, 1985, there were no changes in the actuarial present value as a result of a change in actuarial assumptions (note 3).

See accompanying notes to financial statements.

Notes to Financial Statements

June 30, 1986 and 1985

- (1) Description of State of Alaska Teachers' Retirement System (Plan)

 The following brief description of the Plan is provided for general information purposes only. Participants should refer to the Plan agreement for more complete information.
 - The Plan is a joint-contributor plan created by State of Alaska Statutes effective July 1, 1955. The Plan was established to provide benefits for teachers and other eligible participants.

Pension Benefits

General employees with eight or more years of credited service are entitled to annual pension benefits beginning at normal retirement age (55) equal to 2% of their highest three-year average monthly compensation for each year of service. The Plan permits early retirement at age 50. Employees may elect to receive their pension benefits in the form of a joint and survivor annuity. Effective January 1, 1987, a married member who retires must receive his benefit in the form of a joint and survivor annuity unless the member's spouse consents to another form of benefit. Minimum benefits for employees eligible for retirement are \$25 per month for each year of credited service. In addition, major medical benefits are provided.

Death and Disability Benefits

- If an active employee, first hired under the Plan before July 1, 1982 is participating in the supplemental contribution provision, dies and is survived by a dependent child or children, the employee's spouse and children receive a survivor's allowance from the Plan. The amount of the survivor's allowance is determined by the participant's base salary and the number of dependent children. If an active employee was first hired under the Plan on or after July 1, 1982, is not participating in or eligible for coverage under the supplemental contribution provision and dies from an occupational cause, the spouse or beneficiary will receive a monthly pension from the Plan. The amount of the pension changes on the date the employee's normal retirement would have occurred if the employee had lived. The new benefit is based on the employee's average base salary at the time of his/her death and the credited service that would have accrued if the employee had lived and continued to work until normal retirement age.
- If an employee with five or more paid-up years of membership service is not eligible for normal retirement benefits and becomes permanently disabled, the employee is entitled to a monthly benefit. The annual disability benefit is equal to 50% of the base salary at time of disablement plus an additional 10% of his/her base salary for each dependent child up to a maximum of four children.

(Continued)

Notes to Financial Statements

Retirement Incentive Program

Legislation passed in May 1986 established a retirement incentive program designed to encourage eligible employees to voluntarily retire in order to reduce personnel service costs. The program is available to eligible employees until June 30, 1987, except for eligible University of Alaska employees where the program is available from October 1, 1986 to September 30, 1987.

(2) Summary of Significant Accounting Policies

Valuation of Investments

Investments, other than real estate equity fund and loans and mortgages, are carried at market value to reflect the asset values of the Plan as determined by the last quoted sales price at June 30, 1986 and 1985.

Real estate equity funds are stated at estimated market value as determined by the independent management of the investment accounts. These investments do not have a readily available market and generally represent long-term investments.

Loans and mortgages are serviced by the institution from which the loan is purchased. The policy of the Plan is to hold these investments until maturity and, accordingly, the investments are stated at cost. Loans and mortgages include approximately \$2,078,000 and \$2,440,000 for 1986 and 1985, respectively, of other real estate owned. Other real estate owned represents properties on which the Plan has foreclosed and is holding with the intent to resell.

Contributions Receivable

Contributions from employees and employers for service through June 30 are accrued. These contributions are considered fully collectible and, accordingly, no allowance for uncollectible receivables is considered necessary.

Investment Income Receivable

Investment income receivable represents amounts earned but not yet received as of June 30. These amounts are considered fully collectible and, accordingly, no allowance for uncollectible receivables is considered necessary.

(Continued)

Notes to Financial Statements

Accumulated benefits are those future periodic payments, including lump-sum distributions, that are attributable under the Plan's provision to the service employees have rendered. Accumulated benefits include benefits expected to be paid to retired or terminated employees or their beneficiaries, beneficiaries of employees who have died, and present employees or their beneficiaries. Benefits under the Plan are based on employees' compensation during their highest three years of credited service. The accumulated benefits for active employees are based on their average compensation during the three years ending on the date that the benefit information is presented (the valuation date). Benefits payable under all circumstances—retirement, death, disability, and termination of employment—are included, to the extent they are deemed attributable to employee service rendered to the valuation date.

The actuarial present value of accumulated benefits is determined by an actuary from William M. Mercer-Meidinger Incorporated and is that amount that results from applying actuarial assumptions to adjust the accumulated benefits to reflect the time value of money (through discounts for interest) and the probability of payment (by means of decrements such as for death, disability, withdrawal, or retirement) between the valuation date and the expected date of payment. The significant actuarial assumptions used in the valuations as of June 30, 1985 are as follows:

- a. Actuarial cost method attained age normal, also known as aggregate method with supplemental liability, unfunded accrued benefit liability amortized over 25 years.
- b. Mortality basis 1971 Group Annuity Mortality Table.
- c. Retirement age the average of age 60 and the earliest age for which unreduced retirement benefits will be available.
- d. Interest rate 8% per annum, compounded annually, net of investment expenses.
- e. Health inflation 8% per annum.
- f. Salary scale increase of 8% per annum for the first five years of employment and 7% per year thereafter.

(Continued)

Notes to Financial Statements

- g. Cost of living allowance (domicile in Alaska) 49% of those receiving benefits will be eligible to receive the cost of living allowance.
- h. Contribution refunds 100% of those terminating after age 35 with eight or more years of service will leave their contributions and thereby retain their deferred vested benefit. All others who terminate are assumed to have their contributions refunded.
- i. Asset valuation three-year average ratio between market and cost values of the Plan's assets.

Turnover and disability assumptions are based upon actual historical occurrence rates of the Plan. The foregoing actuarial assumptions are based on the presumption that the Plan will continue. Were the Plan to terminate, different actuarial assumptions and other factors might be applicable in determining the actuarial present value of accumulated benefits.

(4) Funding Policy

Employees' Contributions

Employees contribute 7% of their base salary as required by statute. A qualified member may make an additional contribution of 1% of his/her base salary. Contributions are collected by employers and remitted to the Plan.

Employer Contribution

The Employers' contribution rate is determined annually on an actuarial basis.

(5) Investments

During 1986 and 1985, the Plan's investments (including investments bought, sold, as well as held during the year) appreciated (depreciated) in value as follows:

	<u>1986</u>	<u>1985</u>

	\$ 103,643	78,418

HIGHLIGHTS

This report has been prepared by William M. Mercer-Meidinger, Incorporated to:

- present the results of a valuation of the Alaska Teachers' Retirement System as of June 30, 1985;
- (2) review experience under the plan for the year ended June 30, 1985;
- (3) determine the contribution rates for the State for each school district in the system;
- (4) provide reporting and disclosure information for financial statements, governmental agencies, and other interested parties.

The report is divided into two sections. Section I describes the basis of the valuation. It summarizes the plan provisions, provides information relating to the plan participants, and describes the funding methods and actuarial assumptions used in determining liabilities and costs.

Section 2 contains the results of the valuation. It includes the experience of the plan during the 1984-85 plan year, the current annual costs, and reporting and disclosure information.

The principle results are as follows:

Funding S	tatus as of June 30:		1984	1985
(a)	Valuation Assets*	\$	674,382	\$ 833,617
(b)	Present Value of Accrued Benefits*		804,018	1,042,551
(c)	Accrued Benefit Funding Ratio (a) / (b)		83.9%	80.0%
Contribut	ions for Fiscal Year		1987	1988
(a)	Normal Cost		13.91%	11.62%
(b)	Past Service Rate		3.45%	5.06%
(c)	Total Contribution Rate	. •	17.36%	16.68%

^{*} In thousands.

In preparing this valuation, we have employed generally accepted actuarial methods and assumptions, in conjunction with employee data provided to us by the plan sponsor and financial information provided by the audited report from Peat, Marwick, Mitchell and Company, to determine a sound value for the plan liabilities. We believe that this value and the method suggested for funding it are in full compliance with the Employee Retirement Income Security Act of 1974, the Internal Revenue Code, and all applicable regulations.

J. Richardson

Respectfully submitted,

Robert F. Richardson, ASA

RFR/js

Principal

March 17, 1986

ANALYSIS OF THE VALUATION

Actuarial Method and Assumptions

This actuarial report is the first to utilize the projected unit credit actuarial method. The actuarial assumptions remain unchanged since those adopted in March 1982. The Alaska statutes require that an experience analysis of the Systems' actuarial assumptions be performed at least every six years. Although changes have occurred since the last experience study, we still believe that the current actuarial assumptions are appropriate to determine liabilities and costs under the Teachers' Retirement System.

This change in funding method was made to conform to the accounting procedures which were adopted by the Governmental Accounting Standards Board (GASB) in December 1985. Under the prior actuarial funding method, the funding ratio would have been 87.6% while the total employer contribution rate would have been 17.14%.

Investment Performance

During the 1985 fiscal year, the investment return rate, based upon market values, was 21.44% . . . clearly the highest return rate since the inception of TRS. Based upon the three-year smoothing approach used to determine valuation assets, the return rate during fiscal year 1985 was 14.44%.

Health Inflation

For the first time since retiree health coverage became a benefit in TRS, there has been a decrease in the monthly premium. As reported in last year's actuarial report, we had projected the FY86 premium to decrease to \$165 per month. The actual premium for the year decreased to only \$168.25. Consequently, there was a very small actuarial loss from this assumption.

Salary Increases

The third most important factor affecting costs and liabilities under TRS is the impact of inflation on salary increases. For the second straight year, salary increases on an average were less than the actuarial assumption. As of June 30, 1985, the average annual salary was \$41,238 . . . an increase of only 4.6% over the prior year.

Accordingly, there were actuarial gains from less-than-anticipated salary increases which contributed, along with the excellent investment performance, to the decrease in contribution rates.

Membership Statistics

During the 8 1/2 year period from January 1, 1977 to June 30, 1985, there has been a steady trend upward in the average age, with average annual increases of .33 years. The age of the average teacher is now 40.04. This phenomenon continues to put upward pressure on costs and liabilities . . . thus dampening the beneficial affects of actuarial gains from investment and salary increases. Average credited service has held steady at just over 9.5 years.

Retiree Statistics

There was a large increase in the number of new retirees during FY85, with 289 new benefit recipients added to the pension rolls. Average age at retirement increased slightly for the second year in a row. The average monthly retirement check for new retirees now exceeds \$2,000.

Conclusions

Primarily due to the excellent investment performance during FY85, the total contribution rate decreased. Cost containment measures in the retiree health program, as well as a general slowing of medical inflation, both contributed to a smaller actuarial loss from health inflation than we have witnessed in several years. The change in actuarial funding methods led to a decrease in both the funding ratio and the employer contribution rate.

Section 1.3 ACTUARIAL BASIS

Valuation of Liabilities

- A. Actuarial Method Projected Unit Credit. The unfunded accrued benefit liability is amortized over 25 years.
- B. Method For Accumulated Plan Benefit Values

The actuarial present value of accumulated plan benefits (the term used for Financial Accounting Standards Board purposes) and present value of accrued benefits are a measure of plan benefits which have been earned to date. These are not only a valuation of retirement benefits, but also of deferred vested, death benefits, and other ancillary benefits. Earnings and service for benefit purposes which are expected to be earned after the valuation date are excluded from these values.

The actuarial assumptions used to determine these values are identical to those used for the funding purposes.

In estimating accumulated benefits, final average compensation is based on compensation data in the possession of the actuary.

C. Actuarial Basis

1.	Interest	8%	per	year,	compounded	annually,
		net	of i	nvestme	ent expenses	•

2. Salary Scale 8% per year for the first five years of employment and 7% per year thereafter.

3. Health Inflation 8% per year.

4. Mortality 1971 Group Annuity Mortality Table.

5. Turnover Based upon the 1980-81 actual total turnover experience. (See Table 1).

6. Disability

Incidence rates in accordance with Table 2. Post-disability mortality in accordance with rates published by the Pension Benefit Guaranty Corporation to reflect mortality of those receiving disability benefits

under Social Security.

Retirement Age

The average of age 60 and the earliest age for which unreduced retirement benefits will be available.

8. Spouse's Age

Wives are assumed to be four years younger than husbands.

9. Contribution Refunds

100% of those terminating after age 35 with eight or more years of service will leave their contributions in the System and thereby retain their deferred vested benefit. All others who terminate are assumed to have their contributions refunded.

10. C.O.L.A.

49% of those receiving retirement benefits will be eligible for C.O.L.A.

11. Sick Leave

4.7 days of unused sick leave for each year of service will be available to be credited once the member is retired.

12. Expenses

No loading for expenses.

Valuation of Assets

Based upon the three-year average ratio between market and book values of the System's assets. Assets are accounted for on an accrual basis.

Valuation of Medical Benefits

Medical benefits for retirees are provided by the payment of premiums from the trust fund. A pre-65 cost and lower post-65 cost (due to Medicare) were assumed such that the total rate for all retirees equals the present premium rate. These medical premiums are then increased with the health inflation assumption. The same method used for funding retirement benefits is also used to fund health benefits.
